### Proposition and Compound Propositions

A proposition is a statement that is either true or false.

- **Negation:**  $\bar{p}$  (not p)
- **Conjunction:**  $p \land q$  (p and q)
- **Disjunction:**  $p \lor q$  (p or q)
- **Exclusive Or:**  $p \oplus q$  (*p* exclusive-or *q*)
- Implication:  $p \implies q$  (p implies q)
- **Biconditional:**  $p \iff q$  (p if, and only if, q)
- ▶  $p \rightarrow q$ : p is a sufficient condition for q.

▶ 
$$\neg p \rightarrow \neg q \equiv q \rightarrow p$$
: *p* is a *necessary* condition for *q*

#### **Truth Table**

р	q	$\neg p$	$p \wedge q$	$p \lor q$	$p \oplus q$	p  ightarrow q	q  ightarrow p	$p \leftrightarrow q$
Т	Т							
Т	F							
F	Т							
F	F							

- Two compound propositions are logically equivalent if they always have the same truth value.
- Can be proved by the truth tables or a sequence of previously derived logically equivalent statements.

#### **Truth Table**

р	q	$\neg p$	$p \wedge q$	$p \lor q$	$p \oplus q$	p  ightarrow q	q  ightarrow p	$p \leftrightarrow q$
Т	Т	F						
Т	F	F						
F	Т	Т						
F	F	Т						

- Two compound propositions are logically equivalent if they always have the same truth value.
- Can be proved by the truth tables or a sequence of previously derived logically equivalent statements.

#### **Truth Table**

р	q	$\neg p$	$p \wedge q$	$p \lor q$	$p \oplus q$	p  ightarrow q	q  ightarrow p	$p \leftrightarrow q$
Т	Т	F	Т					
Т	F	F	F					
F	Т	Т	F					
F	F	Т	F					

- Two compound propositions are logically equivalent if they always have the same truth value.
- Can be proved by the truth tables or a sequence of previously derived logically equivalent statements.

#### **Truth Table**

р	q	$\neg p$	$p \wedge q$	$p \lor q$	$p \oplus q$	p  ightarrow q	q  ightarrow p	$p \leftrightarrow q$
Т	Т	F	Т	Т				
Т	F	F	F	Т				
F	Т	Т	F	Т				
F	F	Т	F	F				

- Two compound propositions are logically equivalent if they always have the same truth value.
- Can be proved by the truth tables or a sequence of previously derived logically equivalent statements.

#### **Truth Table**

р	q	$\neg p$	$p \wedge q$	$p \lor q$	$p \oplus q$	p  ightarrow q	q  ightarrow p	$p \leftrightarrow q$
Т	Т	F	Т	Т	F			
Т	F	F	F	Т	Т			
F	Т	Т	F	Т	Т			
F	F	Т	F	F	F			

- Two compound propositions are logically equivalent if they always have the same truth value.
- Can be proved by the truth tables or a sequence of previously derived logically equivalent statements.

#### **Truth Table**

р	q	$\neg p$	$p \wedge q$	$p \lor q$	$p \oplus q$	p  ightarrow q	q  ightarrow p	$p \leftrightarrow q$
Т	Т	F	Т	Т	F	Т		
Т	F	F	F	Т	Т	F		
F	Т	Т	F	Т	Т	Т		
F	F	Т	F	F	F	Т		

- Two compound propositions are logically equivalent if they always have the same truth value.
- Can be proved by the truth tables or a sequence of previously derived logically equivalent statements.

#### **Truth Table**

р	q	$\neg p$	$p \wedge q$	$p \lor q$	$p \oplus q$	p  ightarrow q	q  ightarrow p	$p \leftrightarrow q$
Т	Т	F	Т	Т	F	Т	Т	
Т	F	F	F	Т	Т	F	Т	
F	Т	Т	F	Т	Т	Т	F	
F	F	Т	F	F	F	Т	Т	

- Two compound propositions are logically equivalent if they always have the same truth value.
- Can be proved by the truth tables or a sequence of previously derived logically equivalent statements.

#### **Truth Table**

p	q	$\neg p$	$p \wedge q$	$p \lor q$	$p \oplus q$	p  ightarrow q	q  ightarrow p	$p \leftrightarrow q$
Т	Т	F	Т	Т	F	Т	Т	Т
Т	F	F	F	Т	Т	F	Т	F
F	Т	Т	F	Т	Т	Т	F	F
F	F	Т	F	F	F	Т	Т	Т

- Two compound propositions are logically equivalent if they always have the same truth value.
- Can be proved by the truth tables or a sequence of previously derived logically equivalent statements.

### Predicates and Quantifiers

- A predicate P(x) contains a variable and becomes a proposition when the variable is assigned a value (e.g., x < 5)</p>
- Universal Quantifier: ∀ ("for all") alongside P(x) means P(x) is true for all elements in the domain of x. (e.g., ∀x ∈ Z, x<sup>3</sup> + 1 is composite.)
- Existential Quantifier: ∃ ("there exists") alongside P(x) means there exists an element in the domain of x for which P(x) is true. (e.g., ∃x ∈ N, x<sup>2</sup> ≤ x)
